* Achtung! Die Japanversion dieses Gerätes darf nur gemäß den technischen Daten auf dem Typenschild des Sicherheitstransformators an ein japanisches Stromnetz angeschlossen werden.

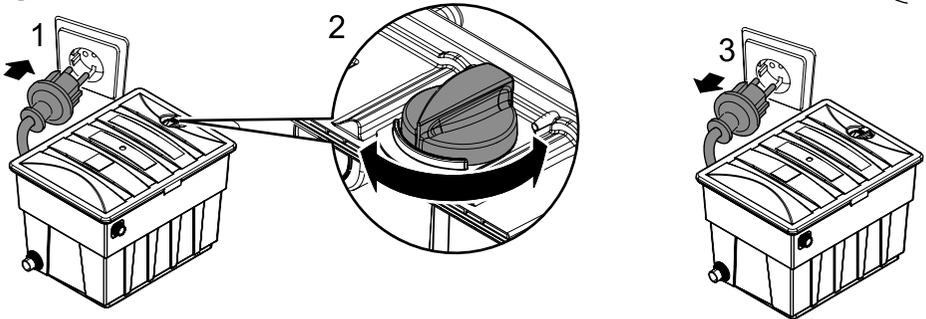

* Attention! Only connect the Japanese unit version to a Japanese power mains in accordance with the technical data on the type plate of the safety transformer.

ご注意! 本装置の日本向けバージョンは、安全トランスの銘板上に記載された技術データに基づき日本国内の電源網にのみ接続してください。

Information about this operating manual

Please read the operating instructions and familiarise yourself with the unit prior to using it for the first time. Adhere to the safety information for the correct and safe use of the unit.

Please keep these operating instructions in a safe place! Also hand over the operating instructions when passing the unit on to a new owner. Ensure that all work with this unit is only carried out in accordance with these instructions.

Intended use

The Biotec 12/18/36 Screenmatic series, in the following text termed unit, is exclusively intended for the mechanical and biological cleaning of garden ponds with or without fish population at a minimum water temperature of +8°C. Ensure that the safety transformer is only operated at ambient temperatures of -10°C to +40°C.

The unit is suitable for use for **swimming and bathing ponds (A)** in accordance with the national installer regulations.

Use other than that intended

Danger to persons can emanate from this unit if it is not used in accordance with the intended use and in the case of misuse. If used for purposes other than that intended, our warranty and operating permit will become null and void.

CE Manufacturer's Declaration

We declare conformity in the sense of the EC directive, EMC directive (89/336/EEC) as well as the low voltage directive (73/23/EEC). The following harmonised standards apply:

EN 60335-1, EN 61558-1, EN 61558-2-6, EN 55014-1, EN 55014-2, EN 61000-3-2, EN 61000-3-3

Signature: 

Safety information

OASE has manufactured this unit according to the current state of the art and the valid safety regulations. Despite the above, hazards for persons and assets can emanate from this unit if it is used in an improper manner or not in accordance with its intended use, or if the safety instructions are ignored.

For safety reasons, children and young persons under 16 years of age as well as persons who cannot recognise possible danger or who are not familiar with these operating instructions, are not permitted to use the unit!

The combination of water and electricity can lead to danger to life and limb, if the unit is incorrectly connected or misused.

Attention! Danger of electric shock. Ensure that the cable connection points and their surroundings are dry.

The transformer and the plug connectors of the power cables supplied are not water-tight, but only rain and splash-proof. Do not route or fit in the water. Protect the plug connection from moisture. Protect the connection cable when burying to avoid damage. Only operate the unit when plugged into an earthed socket. The latter must have been installed in accordance with the valid national regulations. Ensure that the protective earth wire is led to the unit. Only use electrical equipment, adapters, extension or connection cables with an earthed contact which are approved for outside use. Ensure that the power connection cable cross section is not smaller than that of the rubber sheath with the identification H05RN-F. Extension cables must meet DIN VDE 0620. Only use cables when unwound prior to use. Ensure that the unit is fused for a rated residual current of max. 30 mA via a residual current-operating system (FI or RCD resp.). Electrical installations in garden ponds and swimming ponds must meet the national and international

- GB -

regulations valid for installers. Ensure that the safety transformer is located at a minimum spacing from the pond edge of 2 m (in Germany) and 2.5 m in Switzerland. Compare the electrical values of the power supply with those on the type plate on the packaging or on the unit itself. Never operate the unit if the cable or housing are defective! Disconnect the power! Do not carry or pull the unit by the connection cable. Only use the unit with the attendant safety transformer contained in our scope of delivery. Never open the unit housing or its attendant components, unless this is explicitly mentioned in the operating instructions. Always disconnect the power supply of all units located in water and of this unit prior to performing work on the unit! The power cable cannot be replaced, if damaged, the entire Screenmatic insert has to be replaced! Never carry out technical changes to the unit. Only use original spare parts and accessories. Only allow authorised customer service outlets to perform repairs. Never use the system for filtering fluids other than water! Ensure that the filter will not overflow. Danger of completely emptying the pond. For your own safety, consult an expert when you have questions or encounter problems!

Installation (A)

Lay the outlet pipes for the water outlet into the pond and for the drain outlet into the sewage system or flower bed with a sufficient gravity. Ensure that the unit is placed at a flood protected place and on firm ground (A1). When installing an OASE UVC pre-clearing unit (e.g. Bitron), place the unit at a minimum distance of 2 m from the pond edge (A1). Place the transformer at a minimum distance of 2 m from the pond edge at a flood protected place (A1). Ensure unrestricted access to the cover to be able to carry out work on the unit. Push (A2) or turn the hose onto the stepped hose nozzle and secure with a hose clip. Push the flat sealing ring on the stepped hose connection, insert the stepped hose connection into the inlet opening of the filter housing, and screw-tighten the water inlet socket from inside (A2). Close the second water inlet with the closed hose nozzle (except when fitting a OASE UVC pre-clearing unit, e.g. Bitron). Lay the hose such that it will not deform when walked on, avoid kinks and connect it to the pump.

Start-up (B)

Switch on the pump, open the unit cover, set the water jet using regulator at the water distributor (B2) such that it hits the first third of the screen. Close the cover, connect the motor connection cable to the transformer, connect power plug (B1). The unit functions automatically, cleaning is every 30 minutes. Note: The Biotec filter is a biological filter system and requires several weeks after its first installation to reach its full biological effect.

Maintenance and cleaning (C)

Adhere to the safety information given above! Always unplug the power cables of the pump and of the Screenmatic prior to starting work (B3)! Only clean the filter when required, do not use chemical cleaning agents to permit the filter biology to optimally develop, knowing that cleaning agents kill the bacteria in the foam filters.

Clean and change the Screenmatic screen

Open the unit cover, remove and empty out the collection container (C1). If required, remove the Screenmatic insert (C2). For this purpose, tilt up the screen insert, loosen the sealing plug of the power cable from the container wall inward, pull the power cable inward through the container wall, press in the lateral engagement hooks on the Screenmatic insert and remove same. Press the Screenmatic unit of Biotec 36 to the rear (C2), then remove. Undo the lateral screws (C3) from the side section without motor, remove side section, release the clamping lever (C4), and remove the Screenmatic screen to the front. Thoroughly clean the Screenmatic screen, the strippers, and the screen from both sides under running water. Replace the screen, if necessary. Reassemble the Screenmatic insert in the reverse order, lead the power cable through the opening in the container wall and close the wall using the sealing plug.

Clean and replace the foam filters, clean the substrate tubes or change the substrate

Open the unit cover and tilt the screen insert upward (C5). To mechanically clean the foam filters, place the cleaning tool on a foam holder and compress the foam inserts several times; if necessary, remove the foam filters (C6) and rinse with clean water. Remove the separating plate between the filter and substrate chamber. Open the cleaning outlet using the slide valve until the water has completely drained, close and switch the pump on until the filter is completely filled with pond water. Open the cleaning outlet again and drain the water. Repeat rinsing 2 – 3 times. Remove the substrate pipes, clean under running water, or replace the substrate. Re-insert the substrate tubes in the guides, refit the separating plate, tilt the screen insert down again and close the filter cover, then switch the pump on again.

Storage/Over-wintering

Put the unit out of operation at water temperatures below 8 °C or, at the latest, when freezing temperatures are to be expected. Drain and thoroughly clean the unit, check for damage. Remove, clean, dry and store all foam inserts and substrate tubes in a frost-free environment. Do not immerse the power plug in the water! Ensure that the storage place is inaccessible to children. Cover the filter container such that the ingress of rain water is excluded. Drain all hoses, pipes and connections as far as possible.

Wearing parts

Foam filters, substrate filters and the Screenmatic screen are wearing parts and are, therefore, not covered by our warranty. Neither the transformer nor the Screenmatic drive can be repaired in the event of damage to the cables or the housing and have to be replaced.

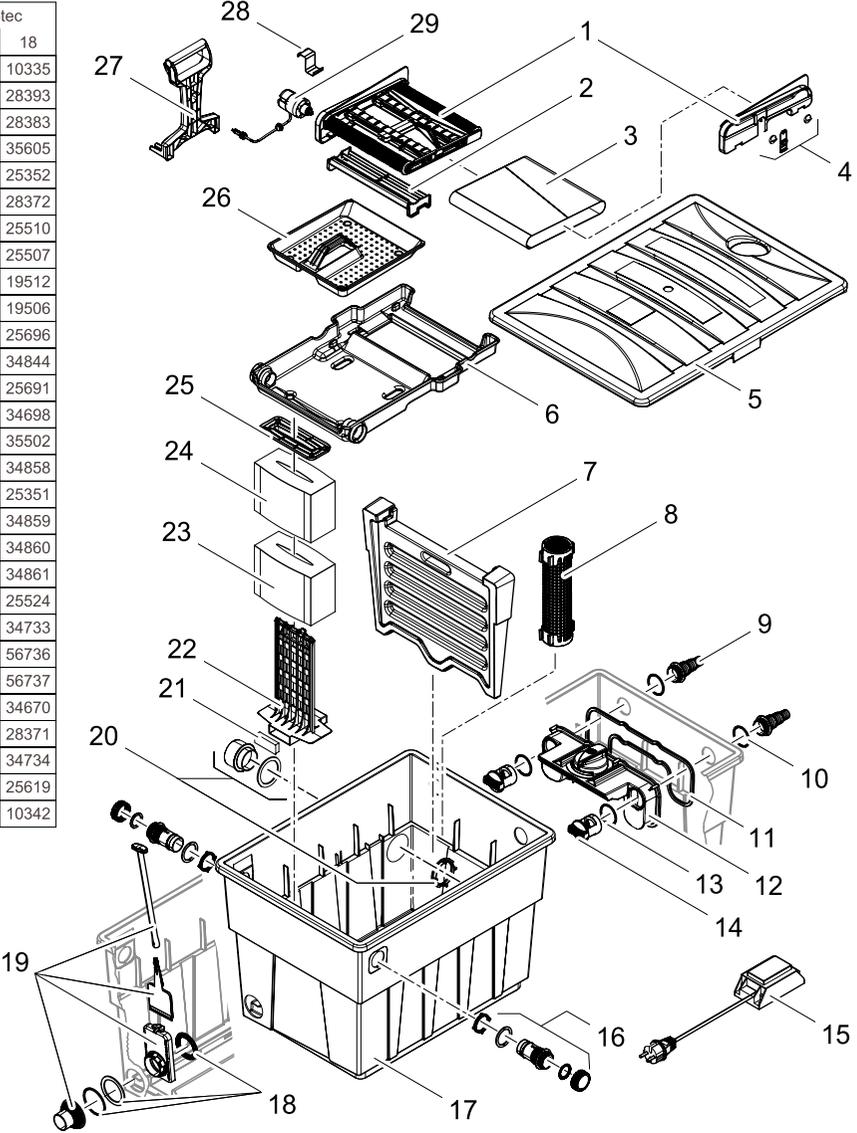

Disposal

Dispose of the unit in accordance with the national legal regulations. Ask your specialist dealer.
