Translation of the original Operating Instructions

## **WARNING**

- This unit can be used by children aged 8 and above and by persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they are supervised or have been instructed on how to use the unit in a safe way and they understand the hazards involved.
- Do not allow children to play with the unit.
- Only allow children to carry out cleaning and user maintenance under supervision.
- Ensure that the unit is fused for a rated fault current of max. 30 mA by means of a fault current protection device.
- Only connect the unit if the electrical data of the unit and the power supply correspond. The unit data is to be found on the unit type plate, on the packaging or in this manual.
- Possible death or severe injury from electrocution! Before reaching into the water, disconnect all electrical units in the water from the mains.
- Only operate the unit if no persons are in the water.
- Do not use the unit if electrical cables or housings are damaged.
- A damaged connection cable cannot be replaced. Dispose of the unit.

### **Safety information**

#### **Correct electrical installation**

- Electrical installations must meet the national regulations and may only be carried out by a qualified electrician.
- A person is regarded as a qualified electrician if, due to his/her vocational education, knowledge and experience, he or she is capable of and authorised to judge and carry out the work commissioned to him/her. This also includes the recognition of possible hazards and the adherence to the pertinent regional and national standards, rules and regulations.
- For your own safety, please consult a qualified electrician.
- Extension cables and power distributors (e.g. outlet strips) must be suitable for outdoor use (splash-proof).
- Protect the plug connection from moisture.
- Only connect the unit to a correctly fitted socket.

#### **Safe operation**

- The impeller unit in the pump contains a magnet with a strong magnetic field that may affect the operation of pacemakers or implantable cardioverter defibrillators (ICDs). Always keep magnets at least 0.2 m away from implanted devices.
- Never carry or pull the unit by the electrical cable.
- Route cables such that they are protected from damage and do not present a tripping hazard.
- Never carry out technical changes to the unit.
- Only carry out work on the unit described here.
- Only use original spare parts and accessories for the unit.

## Information about these operating instructions

Welcome to OASE Living Water. You have made a good choice by purchasing this product PondJet Eco. Prior to commissioning the unit, please read the instruction manual carefully and fully familiarise yourself with the unit. Ensure that any work on or with this unit is carried out according to this manual. Adhere to the safety information for the correct and safe use of the unit. Keep these instructions in a safe place. Please also hand over the instructions when passing the unit on to a new owner.

## Warnings used in these instructions

The warning information is categorised by signal words, which indicate the extent of the hazard.

### WARNING

- Indicates a possibly hazardous situation.
- Non-observance may lead to death or serious injuries.

### CAUTION

- Indicates a possibly hazardous situation.
- Non-observance may lead to slight or minor injuries.

### NOTE

Information for the purpose of clarification or for preventing possible damage to assets or to the environment.

## Cross-references used in these instructions

5 A reference to a figure, e.g. figure A.

® Reference to another section.

## Scope of delivery

<b>5 A</b>	PondJet Eco
1	Float
2	Nozzle body with integrated multifunctional nozzle (multifunctional nozzle is closed off with a cover disk and plug)
3	Pump
4	Retaining brace for pump
5	Adapter for connection of pump to nozzle body
6	Flat seal 40 x 30 x 2 mm, positioned between adapter (5) and pump (3)
7	M8 x 130 mm hexagon screws, washers and self-locking nuts
8	M6 x 35 mm Allen screws, tooth lock washers and nuts
9	M8 x 40 mm stud bolts, washers and nuts

## Product Description

### Properties

- Floating fountain for flexible installation in ponds and lakes, suitable for all ground conditions.
- Multifunctional nozzle already integrated.
- Simple installation thanks to float function.
- Impressive water display with a height and width of up to 3 m.
- Additional nozzle patterns and lighting set available as accessories.

### Environmental Function Control (EFC)

When started up, the pump automatically performs a pre-programmed self-test (**Environmental Function Control (EFC)**). The pump detects if it is running dry / blocked or submerged. The pump switches off automatically after approx. 90 seconds if it runs dry/is blocked. In the event of a malfunction, disconnect the power supply and "flood the pump" or remove the obstacle. Afterwards, the unit can be restarted.

### Dynamic Function

Different values for the pump flow rates are pre-programmed in the pump control system to allow a dynamic fountain pattern with changing heights and diameters. When the Dynamic Function is activated, the pump is continuously controlled with these values.

### Intended use

PondJet Eco, referred to as "unit", may only be used as specified in the following:

- For creating a water fountain in lakes or large ponds with or without fish.
- For aeration and supplying oxygen to garden ponds.
- Operate in accordance with instructions.
- Operation under observance of the permissible water quality. (® Water quality)
- For operation with clean water.

The following restrictions apply to the unit:

- Do not use in swimming ponds.
- Never use the unit with fluids other than water.
- Never run the unit without water.
- Do not use for commercial or industrial purposes.
- Do not use in conjunction with chemicals, foodstuff, easily flammable or explosive substances.

### Installation

The unit must be completely assembled before it can be placed in the pond. Individual assembly steps:

- Fitting the nozzle body
- Fitting the pump
- Fitting the nozzle

### Fitting the nozzle body

How to proceed:

5 B

1. Insert the nozzle body into the float.
2. Insert the screws with washers through the holes in the nozzle body.
  - Ensure that the screws protrude from the bottom of the float.
3. Screw the self-locking nuts with washers onto the screws and tighten.
  - Only tighten the screws until the nozzle body is fixed without play (do not overtighten).

## Fitting the pump

How to proceed:

5 C

1. Screw the reduction element onto the pump outlet up to the stop.
  2. Screw the pump and reduction element with flat seal onto the inlet of the nozzle body and hand tighten.
  3. Align the pump.
    - The filter basket of the pump must be centrally aligned to the counterweight.
    - Do not turn the pump too far in order to avoid damage.
    - Turn the pump back, if necessary, to the previous recess.
  4. Screw the stud bolts into the two threaded holes on the right and left next to the pump and tighten.
    - Select the centre of the three threaded holes on both sides.
  5. Screw the nuts as far as possible onto the stud bolts.
    - The nuts serve as a support for the retaining brace.
  6. Fit the retaining brace.
- 5 D
7. Insert the Allen screws through the base of the pump and through the retaining brace, screw on the nuts together with tooth lock washer and tighten.
  8. Turn the nuts on the stud bolts up as far as the retaining brace.
    - Ensure that the retaining brace fixes the pump in place without tension.
  9. Screw the nuts with washer onto the stud bolts and tighten.

## Fitting the nozzle

### Multifunctional nozzle

How to proceed:

5 E

1. Unscrew the plug and remove together with the cover disk and both O-rings.
2. Screw in the plug with O-ring and tighten.
  - The outlets of the multifunctional nozzle are now uncovered.

### Optional nozzle

Connection: 25 mm (1")

How to proceed:

5 F

1. Unscrew the plug with O-ring and remove.
2. Screw in the optional nozzle with O-ring and tighten.
  - The nozzle is now ready for use and the outlets of the multifunctional nozzle are closed off with the cover disk.

## Installation

### WARNING

Possible death or severe injury from hazardous electrical voltage!

- Prior to reaching into the water, isolate (switch off and disconnect) all units/devices used in the water.
- Isolate the device (disconnect from the power supply) before carrying out any work on it.

### WARNING

Death or serious injuries from hazardous electrical voltage due to operation of this unit in a swimming pond.

- Never operate this unit in a swimming pond.

**5 G H**

The unit floats on the water and therefore has to be moored to the edge or base of the pond (e.g. with nylon ropes).

- Necessary minimum depth of water: 0.5 m

**Mooring to the edge of the pond**

- Attach the ends of the nylon ropes to the three holes in the float.
- Position the unit in the water and attach the other ends of the nylon ropes to the edge of the pond, ensuring that they are uniformly distributed around the edge of the pond.
- Only moderately tension the nylon ropes to allow for fluctuations in the water level.
- If the nylon ropes present a hazard, secure the entire area around the unit.
- The connection cable must be provided with strain relief.

**Mooring to the bottom of the pond**

- Determine the depth of the water and cut three nylon ropes to length (depth of the water plus 1 m).
- Attach the ends of the nylon ropes to the three holes in the float.
- Attach the other ends of the nylon ropes to a weight (approx. 20 kg).
- Position the unit in the water and lower the weight to the bottom of the pond.
- Ensure that the nylon ropes are not tensioned in order to allow for fluctuations in the water level.
- The connection cable must be provided with strain relief.

**Commissioning/start-up**

**Switching on:** Connect the unit to the mains. The unit switches on immediately.

**Switching off:** Disconnect the unit from the mains.

**Dynamic Function**

When it is switched on, Dynamic Function controls the pump and ensures a dynamic fountain display.

How to proceed:

5 I

- Slide the switch.
  - ON: The function is activated.
  - OFF: The function is deactivated.

**NOTE**

When the Dynamic Function is activated, the function of the EFC (Environmental Function Control) is limited.

- The unit is not protected from running dry.

**Remedy of faults**

Malfunction	Cause	Remedy
Pump does not start.	No mains voltage	Check the mains voltage. Check supply lines.
Pump does not deliver.	Filter housing clogged	Clean
Insufficient delivered quantity / unsatisfactory fountain display	Filter housing clogged Multifunctional nozzle clogged	Clean the multifunctional nozzle.
Pump switches off after a short running period.	Excessively soiled water Water temperature too high The impeller unit is blocked Pump has run dry.	Clean the pump. The pump automatically switches on again once the motor has cooled down. Note maximum water temperature of +35°C. The pump automatically switches on again once the motor has cooled down. Disconnect the power supply and remove obstacle. Then switch the pump on again. Flood the pump. Fully submerge the pump for operation in the pond.
Height of the fountain varies.	Dynamic Function activated	Deactivate Dynamic Function

## Maintenance and cleaning

### WARNING

Possible death or severe injury from hazardous electrical voltage!

- Prior to reaching into the water, isolate (switch off and disconnect) all units/devices used in the water.
- Isolate the device (disconnect from the power supply) before carrying out any work on it.

## Cleaning the device

Recommendation regarding cleaning:

- Clean the unit as required but at least twice a year.
- When cleaning the pump, pay particular attention to the cleaning of the impeller unit and pump housing.

- Do not use aggressive cleaning agents or chemical solutions as they could attack the housing or impair the function of the unit.
- Recommended cleaning agent for removing stubborn limescale deposits:
  - Pump cleaning agent PumpClean from OASE.
  - Vinegar- and chlorine-free household cleaning agent.
- After cleaning, thoroughly rinse all parts in clean water.

How to proceed:

5 J

1. Turn the filter basket counterclockwise and remove.
  - The filter basket is fastened to the pump with a bayonet lock.
2. Clean all parts.
  - Use a soft brush.
  - Rinse parts in clean water.
3. Reassemble the unit in the reverse order.

### NOTE

For soiled water, we recommend using a filter bag (available in specialist stores) to ensure that fewer dirt particles enter the unit. Place the filter bag around the pump filter basket and fasten correctly.

## Replacing the impeller unit

### NOTE

The impeller unit contains strong magnets that attract magnetic particles (e.g. iron filings).

- All particles must be removed from the impeller unit before reassembly. Any remaining particles can cause irreparable damage to the impeller unit and motor block.

Prerequisite:

- The pump is dismantled.
- ® Assembling the pump. Disassemble in the reverse order.

How to proceed:

5 K

1. Turn the filter basket counterclockwise and remove.
  - The filter basket is fastened to the pump with a bayonet lock.
2. Remove the four screws and remove the pump casing together with the intermediate casing.
3. Pull out the impeller unit and replace if necessary.
  - Use a wide-blade screwdriver to carefully lever out the impeller unit if necessary.
4. Reassemble the unit in the reverse order.

### Cleaning the multifunctional nozzle

How to proceed:

5 L

1. Remove three screws.
2. Remove the multifunctional nozzle.
  - An O-ring is seated in a groove on the multifunctional nozzle.
3. Clean the multifunctional nozzle together with the O-ring using clean water.
  - Use a soft brush as an aid.
  - Ensure that the O-ring fits cleanly into the groove on the multifunctional nozzle.
4. Reassemble the unit in the reverse order.

### Spare parts

The use of original parts from OASE ensures continued safe and reliable operation of the unit.

Please visit our website for spare parts drawings and spare parts.

[www.oase-livingwater.com/spareparts](http://www.oase-livingwater.com/spareparts)

### Wear parts

- Impeller unit

### Storage/overwintering

The unit is frost resistant to minus 20 °C. Should you store the unit outside of the pond, clean it thoroughly with a soft brush and water, check it for damage, then store immersed in water or filled with water. Do not immerse the power plug in water!

### Repair

Repair is not possible in the following cases. The pump has to be replaced.

- If there is no replacement part approved by OASE for a defective component.
- If an electric cable permanently connected to the pump becomes damaged or is shortened.

### Disposal

#### NOTE

Do not dispose of this unit with domestic waste.

- Render the unit unusable beforehand by cutting the cables and dispose of the unit via the return system provided for this purpose.
